

Case Study

SSW was commissioned to design and develop a .NET Windows Forms Solution for Suntory Alcohol to assist with the process of selling their products (Midori etc) to bars around Australia. Designed to operate on a tablet PC, the **Suntory Cocktail Menu Builder** allows sales people to walk into a bar and design a custom cocktail menu that utilizes Suntory alcohol products.

The application allows you to select from a large range of possible cocktails, as well as choose options like menu size, fonts, colors and finish, then view your newly created menu as a PDF so it can be signed off and sent to the printer.

“Our business could never have achieved the level of volume and success it has without the MenuBuilder”

***John Smith
Operations Manager
Suntory Australia***
