SSW
SUPERIOR SOFTWARE for WINDOWS

Case Study

Westbus is Sydney's largest private bus company providing local, city, school and charter bus services.

SSW developed the **Westbus Charter Booking** system to serve multiple concurrent users. SSW replaced an existing DOS system, to automate quote calculation and to integrate with Microsoft Great Plains Accounting for invoicing.

The application was developed as an ASP.NET intranet application using a 4 tier design. The .NET Framework 1.1 was used in conjunction with SQL Server. The system generates reports powered by Crystal Reports whilst being exportable to Adobe Acrobat PDF.

"SSW's simple and efficient design has ensured the application has been quickly accepted by the depot users"

Daniel Fontana
Business Development Manager
Westbus
